THANDOKUHLE JINGELA

Data Analytics & Business Intelligence Professional

Durban, KwaZulu-Natal | 068 284 5690 | thandokuhlejingela@gmail.com
Portfolio Website

PROFESSIONAL SUMMARY

High-achieving Data Analytics and Business Intelligence graduate with an Advanced Diploma in ICT (BI) and a Diploma in ICT (Business Analysis) from Durban University of Technology. Proven expertise in building end-to-end data pipelines, developing executive Power BI dashboards, and training predictive machine learning models (XGBoost, Scikit-Learn) to solve complex business problems. Adept at transforming unstructured datasets into actionable business strategies and scalable modern analytics solutions.

TECHNICAL SKILLS MATRIX

- **Data Science & Machine Learning:** Python (Pandas, Scikit-Learn, XGBoost, Statsmodels, Prophet, SHAP), Feature Engineering, SMOTE Class Balancing, Time-Series Forecasting
- **Business Intelligence & Analytics:** SQL, Power BI, DAX, Power Query Editor, Advanced Excel Modeling & PivotTables, Exploratory Data Analysis (EDA), RFM Customer Segmentation
- **Data Engineering & Methods:** ETL/ELT Pipeline Design, Constrained Optimization, IQR Outlier Auditing, Data Warehousing Concepts
- **Tools & Methodologies:** Git/GitHub, Jupyter Notebook, VS Code, Agile/Scrum Principles, Requirements Elicitation & Analysis

PROJECTS & PORTFOLIO HIGHLIGHTS

ShopTR Analytics — Predictive & Prescriptive Analytics

Tech Stack: Python, Scikit-Learn, XGBoost, Prophet, ARIMA, SHAP

- Accomplished customer churn prediction with high precision by engineering behavioral features and training XGBoost, Random Forest, and Logistic Regression models using SMOTE to handle class imbalance.
- Optimized promotional discount allocations without compromising profit margins by building revenue forecasting models via Prophet/ARIMA and designing a constrained optimization framework.
- Validated model decision metrics across ROC-AUC, Precision-Recall curves, and confusion matrices to formulate data-driven retention recommendations for stakeholders.

ShopTR Analytics — Descriptive Analytics & BI Dashboard

Tech Stack: Power BI, Power Query, Excel, DAX

- Improved dataset integrity across high-volume e-commerce records by designing an automated ETL pipeline with IQR outlier detection and duplicate validation in Power Query.
- Accelerated executive decision-making by deploying an interactive Power BI dashboard featuring dynamic slicers, RFM customer segmentations, and regional KPI tracking via DAX logic.

Insurance Fraud & Risk Assessment System

Tech Stack: Python, Scikit-Learn, XGBoost, Pandas, Data Pipeline

- Developed an automated fraud detection framework, identifying high-risk claims and anomalous policy patterns, by training supervised machine learning classification models.
- Reduced false positive rates and improved risk classification accuracy by engineering domain-specific behavioral features and tuning classification parameters.

PROJECTS & PORTFOLIO HIGHLIGHTS (CONTINUED)

ShopSmart Retail Data Warehouse

Tech Stack: Power Query, Excel, SQL, Data Warehousing

- Executed comprehensive end-to-end data auditing, structural schema alignment, and missing value corrections across large retail sales datasets to improve reporting data quality.
- Standardized data ingestion workflows across multiple sources by designing custom column transformations, text casing standardization, and table appending rules in Power Query.

Healthcare Patient Logging System

Tech Stack: Python, Pandas, Matplotlib, Seaborn, EDA

- Isolated clinical operational bottlenecks and trend patterns, improving insight delivery for healthcare reporting, by performing exploratory data analysis (EDA) and preprocessing on patient logging records.
- Enhanced data cleanliness for downstream analytics reporting by implementing automated missing value imputation and outlier treatment logic in Python.

WORK EXPERIENCE

Eyewear Consultant

Oct 2025 – Sep 2026

Specsavers — Durban, South Africa

- Maintained 100% customer and product transaction accuracy within POS databases, supporting operational reporting and inventory integrity.
- Enhanced customer satisfaction ratings by analyzing customer requirements and vision profile data to deliver tailored product recommendations.
- Resolved complex customer service inquiries efficiently by applying structured business analysis and problem-solving methodologies under time-sensitive branch targets.

EDUCATION

Advanced Diploma in ICT: Business Intelligence 2026

Durban University of Technology

Diploma in ICT: Business Analysis 2023 – 2025

Durban University of Technology

National Senior Certificate (NSC) 2017 – 2021

St Francis College
